powerdash

PowerDash Careers: Software Engineer

PowerDash LLC is a small, Cambridge-based company that has been growing since our founding in 2008. Our software-as-a-service platform is enabling cost-effective monitoring and management of distributed energy systems across North America. We work with top-tier partners to serve the renewable energy and electric vehicle markets. If you would like to join our team and be a part of this important, rewarding work, please review this opening and get in touch if it sounds like it describes you!

Position Description

Join our development team in designing and developing our energy services application and the tools we use to run our business behind the scenes. You'll learn hands-on about clean energy and our customers. You'll work in our team to discover how to best serve these customers and then collaborate in building the applications to do that.

Qualifications

- Substantial experience building, deploying, and managing scalable online applications
- Python expertise
- Fluent in the modern development approaches of Web APIs, XML/JSON data services, and development frameworks such as Django
- Experience working with large, business-critical relational databases
- Good grasp of the challenges and opportunities in developing and deploying applications for a cloud-based platform, such as AWS
- Reasonable Linux/MySQL admin skills
- Experience with Big Data using tools such as NoSQL databases, Hadoop, and Hive
- Exposure to embedded systems development a plus
- Exposure to iOS and/or Android mobile app development a plus
- Interest in energy issues a plus
- Conscientious attention to detail
- Strong, intuitive sense of integrity and ethics

How to Apply

We'd love to hear about both your qualifications for this position and also why you're drawn to it. You can write to Stephen at careers@powerdash.com. Thank you for your interest.
