

PowerDash Careers: Web Application Developer

PowerDash LLC is a small, Cambridge-based company that has been growing since our founding in 2008. We are helping build the web services infrastructure for the new world of smart energy, working with top-tier partners and serving leading energy services integrators across North America. If you would like to join our team and be a part of this important, rewarding work, please review this opening and get in touch if it sounds like it describes you!

Position Description

Join our development team in designing and developing our energy services application and the tools we use to run our business behind the scenes. You'll learn hands-on about clean energy and our customers. You'll work in our team to discover how to best serve these customers and then collaborate in building the application to do that.

Qualifications

- Substantial experience building online applications
- Python expertise
- Fluent in the modern development approaches of Web APIs, XML/JSON data services, and development frameworks such as Django
- Experience working with large, business-critical databases
- Good grasp of the challenges and opportunities in developing applications for a cloud-based platform, such as AWS
- Reasonable Linux/MySQL admin skills
- Exposure to embedded systems development a plus
- Exposure to iOS and/or Android mobile app development a plus
- Interest in energy issues a plus
- Any experience with Big Data applications a plus
- Conscientious attention to detail
- Strong, intuitive sense of integrity and ethics in everything you do

How to Apply

We'd love to hear about both your qualifications for this position and also why you're drawn to it. You can write to Stephen at careers@powerdash.com. We apologize in advance if we aren't able to respond to every inquiry. Thank you for your interest.
